

Terrace screws

Stainless steel screws TERRAS for mounting terrace boards. Those screws are made of stainless steel C2 (stainless steel C2 due to the addition of carbon, can be hardened and strengthened by heat treatment). TERRAS screws are also available as stainless steel C2 with powder painted heads on brown color. Thanks to C2 stainless steel those screws have some magnetic parameters.

TERRAS screws are equipped with special drill at the top of the screw, which enables easy insertion into hard exotic woods. Thanks to little nibs under the head our TERRAS screws meet the surface very smoothly. Also a deep TX recess makes it much easier to screw into the hard wood.
